DEPARTMENT OF TRANSPORT  
MASTER MINIMUM EQUIPMENT LIST

MINISTÈRE DES TRANSPORTS  
LISTE PRINCIPALE D'ÉQUIPEMENT MINIMAL

Aircraft – Aéronef BD-100-1A10	Revision N <sup>o</sup> - N <sup>o</sup> de révision: Original	Page DEF-1
	Date: Sep 30/03	

**DEFINITIONS**

**COLUMN 1**

1. **"System & Sequence Numbers"** are based on Air Transport Association (ATA) Specification No. 100 and items are numbered sequentially.
2. **"Item"** means the equipment, system, component, or function listed in the "Item" column.
3. **Repair Intervals:** All users of an MEL must effect repairs of inoperative systems or components, deferred in accordance with the MEL at or prior to the repair times established by the following letter designators:

**Category "A":** Items in this category shall be repaired within the time interval specified in the remarks column of the operator's approved MEL, excluding the day the malfunction was recorded in the Aircraft Maintenance Record/Logbook.

**Category "B":** Items in this category shall be repaired within three (3) consecutive calendar days (72 hours), excluding the day the malfunction was recorded in the Aircraft Maintenance Record/Logbook. For example, if it were recorded at 10 a.m. on January 26th, the three-day interval would begin at midnight the 26th and end at midnight the 29th.

**Category "C":** Items in this category shall be repaired within ten (10) consecutive calendar days (240 hours), excluding the day the malfunction was recorded in the Aircraft Maintenance Record/Logbook. For example, if it were recorded at 10 a.m. on January 26th, the 10-day interval would end at midnight February 5th.

**Category "D":** Items in this category shall be repaired within one hundred and twenty (120) consecutive calendar days (2880 hours), excluding the day the malfunction was recorded in the Aircraft Maintenance Record/Logbook.

The letter designators are inserted adjacent to Column 2.

4. **\*\*\*\*** symbol indicates an item which is not required by Regulations but which may have been installed on some models of aircraft covered by this MMEL. This item may be included on the operator's MEL after the approving office has determined that the item has been installed on one or more of the operator's aircraft. The symbol, however, shall not be carried forward into the operator's MEL. It should be noted that neither this policy nor the use of this symbol provide authority to install or remove an item from an aircraft. The **\*\*\*\*** symbol may be considered equivalent to the term "if installed".

**COLUMN 2**

1. **"Number Installed"** is the number (quantity) of items installed in the aircraft. This number represents the aircraft configuration considered in developing this MMEL. Should the number be a variable (e.g., passenger cabin items) a number is not required.
2. **"-"** symbol indicates a variable number (quantity) of the item installed.

DEPARTMENT OF TRANSPORT  
MASTER MINIMUM EQUIPMENT LIST

MINISTÈRE DES TRANSPORTS  
LISTE PRINCIPALE D'ÉQUIPEMENT MINIMAL

Aircraft – Aéronef BD-100-1A10	Revision NO - NO de révision: 6	Page
	Date: May 05/22	DEF-2

**NOTE:** Where the MMEL shows a variable number installed, the MEL must reflect the actual number installed or an alternate means of configuration control approved by Transport Canada.

**COLUMN 3**

1. **"Number Required For Dispatch"** is the minimum number (quantity) of items required for operation provided the conditions specified in Column 4 are met.
2. **"-"** symbol indicates a variable number (quantity) of the item required for dispatch.

**NOTE:** Where the MMEL shows a variable number required for dispatch, the MEL must reflect the actual number required for dispatch or an alternate means of configuration control approved by Transport Canada.

**COLUMN 4**

1. **"Remarks or Exceptions"** in this column includes a statement either prohibiting or permitting operation with a specific number of items inoperative, provisos (conditions and limitations) for such operation, and appropriate notes.
2. **"(M)"** symbol indicates a requirement for a specific maintenance procedure which must be accomplished prior to operation with the listed item inoperative. If there is a requirement to perform the procedures more frequently, for example, before each flight, then this is clearly stated in the provisos. Normally these procedures are accomplished by maintenance personnel; however, other personnel may be qualified and authorized to perform certain functions. Procedures requiring specialized knowledge or skill, or requiring the use of tools or test equipment should be accomplished by maintenance personnel. The satisfactory accomplishment of all maintenance procedures, regardless of who performs them, is the responsibility of the operator.

Appropriate procedures, including the identification of qualified personnel authorized to accomplish them are required to be published as part of the operator's manual or MEL.

3. **"(O)"** symbol indicates a requirement for a specific operations procedure which must be accomplished in planning for and/or operating with the listed item inoperative. Normally these procedures are accomplished by the flight crew; however, other personnel may be qualified and authorized to perform certain functions. The satisfactory accomplishment of all procedures, regardless of who performs them, is the responsibility of the operator.

Appropriate procedures are required to be published as part of the operator's manual or MEL.

These procedures are outlined in the Challenger 300 Operations and Maintenance Procedures. If a procedure is not covered in the Challenger 300 Operations and Maintenance Procedures, the procedural requirements can be found in the provisos of the MMEL or in the relevant Airplane Flight Manual (AFM).

**NOTE:** The (M) and (O) symbols are required in the operator's MEL unless otherwise authorized by Transport Canada.

4. **Alphabetical symbol** indicates a proviso (condition or limitation) that must be complied with for operation with the listed item inoperative.

**DEPARTMENT OF TRANSPORT  
MASTER MINIMUM EQUIPMENT LIST**

**MINISTÈRE DES TRANSPORTS  
LISTE PRINCIPALE D'ÉQUIPEMENT MINIMAL**

<b>Aircraft – Aéronef</b> BD-100-1A10	<b>Revision NO - NO de révision:</b> Original	<b>Page</b>
	<b>Date:</b> Sep 30/03	DEF-3

5. **NOTES** provide additional information for crewmember or maintenance consideration. Notes are used to identify applicable material which is intended to assist with compliance, but do not relieve the operator of the responsibility for compliance with all applicable requirements. Notes are not a part of the provisos.
6. **Deleted** in the remarks column after a sequence item indicates that the item was previously listed but is now required to be operative if installed in the aircraft.

**ADDITIONAL DEFINITIONS**

1. **"Administrative Control Item"** means an item listed by the operator in the MEL for tracking and information purposes. It may be added to an operator's MEL provided no relief is granted, or provided conditions and limitations are contained in an approved document (i.e., Structural Repair Manual, Airworthiness Directive, etc.). If relief other than that granted by an approved document is sought for an administrative control item, a request must be submitted to Transport Canada. If the request results in review and approval, the item becomes an MMEL item rather than an administrative control item.
2. **"Airplane Flight Manual"** (AFM) is the document required for type approval and approved by Transport Canada. The approved AFM for the specific aircraft is listed on the applicable Type Approval Data Sheet.
3. **"As required by Regulations"** and **other similar statements** mean that the listed item is subject to certain provisions (restrictive or permissive) expressed in the Federal Aviation Regulations (FARs), Airworthiness Manual (AWM) or Canadian Aviation Regulations (CARs). The number of items specified by these requirements must be operative. When the listed item is not required by the requirements, it may be inoperative for the time specified by repair category.
4. **"Change bar"**: A vertical bar in the margin indicates a change, addition or deletion in the adjacent text for the current revision of that page only. The change bar is dropped at the next revision of that page.
5. **Day of Discovery** is the calendar day an equipment/instrument malfunction was recorded in the Aircraft Maintenance Logbook and/or Record. This day is excluded from the calendar days or flight days specified in the MMEL for the repair of an inoperative item of equipment, and is applicable to all MMEL items in categories A,B,C, and D.
6. **"Deactivated" and "Secured"** means that the specified component must be put into an acceptable condition for safe flight. An acceptable method of securing or deactivating will be established by the operator.
7. **Engine Indicating Crew Alerting System (EICAS)** that provides electronic messages refers to a system capable of providing different priority levels of system information messages (e.g., WARNING, CAUTION, ADVISORY and STATUS). Any airplane discrepancy message that affects dispatchability will be at the WARNING, CAUTION or STATUS level.
8. **"ER"** refers to extended range operations of a two-engine airplane which has a type design approval for ER operations and complies with the provisions of TP 6327 (ETOPS).
9. **"Excess Items"** means those items that have been installed but are redundant to the requirements.

MINISTÈRE DES TRANSPORTS  
LISTE PRINCIPALE D'ÉQUIPEMENT MINIMAL

Aircraft – Aéronef BD-100-1A10	Revision NO - NO de révision:	Original	Page DEF-4
	Date:	Sep 30/03	

10. **"Extended Overwater Operations"** means operations over water at a horizontal distance of more than 50 nautical miles from the nearest shoreline.
11. **"Federal Aviation Regulations" (FARs)** means the applicable portions of the Federal Aviation Act and Federal Aviation Regulations.
12. **"Flight Day"** means a 24-hour period (from midnight to midnight) either Universal Coordinated Time (UCT) or local time, as established by the operator, during which at least one flight is initiated for the affected aircraft.
13. **"Icing Conditions"** means an atmospheric environment that may cause ice to form on the aircraft or in the engine(s).
14. **"Inoperative"** means a system and/or a component malfunction to the extent that it does not accomplish its intended purpose and/or is not consistently functioning normally within its approved operating limit(s) or tolerance(s).
15. **Inoperative components of an inoperative system:** Inoperative items which are components of a system which is inoperative are usually considered components directly associated with and having no other function than to support that system. (Warning/caution systems associated with the inoperative system must be operative unless relief is specifically authorized per the MMEL).
16. **"Passenger Convenience Items"** means those items related to passenger convenience, comfort or entertainment such as , but not limited to, galley equipment, movie equipment, ash trays, stereo equipment, overhead reading lamps, etc.
17. **Placarding:** Each inoperative item must be placarded to inform and remind the crewmembers and maintenance personnel of the equipment condition.
 

**NOTE:** To the extent practical, placards should be located adjacent to the control or indicator for the item affected; however, unless otherwise specified, placard wording and location will be determined by the operator.
18. **"Visual Flight Rules" (VFR)** is as defined in the CARs. This precludes a pilot from filing an Instrument Flight Rules (IFR) flight plan.
19. **"Visual Meteorological Conditions" (VMC)** means the atmospheric environment is such that would allow a flight to proceed under the visual flight rules applicable to the flight. This does not preclude operating under Instrument Flight Rules.
20. **"Visible Moisture"** means an atmospheric environment containing water in any form that can be seen in natural or artificial light; for example, clouds, fog, rain, sleet, hail, or snow.

**PREAMBLE**

All equipment installed on an aircraft in compliance with the Airworthiness Standards and Operating Rules must be operative. However, Canadian Aviation Regulations (605.07, 704.07 and 705.07) permit the publication of a Minimum Equipment List (MEL) where compliance with certain equipment requirements is not necessary in the interests of safety under all operating conditions. Experience has shown that with the various levels of redundancy designed into aircraft, operation of every system or installed component may not be necessary when the remaining operative component can provide the required level of safety.

A Master Minimum Equipment List (MMEL) is developed by Transport Canada, with participation by the aviation industry, to improve aircraft utilization and thereby provide more convenient and economic air transportation for the public. The approved MMEL includes those items of equipment related to airworthiness and operating regulations and other items of equipment Transport Canada finds may be inoperative and yet maintain the required level of safety by appropriate conditions and limitations; it does not contain obviously required items such as wings, flaps, and rudders.

The MMEL is the basis for development of individual operator MELs which take into consideration the operator's particular aircraft equipment configuration and operational conditions. Operator MELs, for administrative control, may include items not contained in the MMEL; however, relief for administrative control items must be approved. An operator's MEL may differ in format from the MMEL, but cannot be less restrictive than the MMEL. The individual operator's MEL, when approved and authorized, permits operation of the aircraft with inoperative equipment.

Equipment not required by the operation being conducted and equipment in excess of the requirements are included in the MEL with appropriate conditions and limitations. The MEL must not deviate from the Aircraft Flight Manual Limitations, Emergency Procedures or with Airworthiness Directives. It is important to remember that all equipment related to the airworthiness and the operating regulations of the aircraft not listed on the MMEL must be operative.

Suitable conditions and limitations in the form of placards, maintenance procedures, crew operating procedures and other restrictions as necessary are specified in the MEL to ensure that the required level of safety is maintained.

The MEL is intended to permit operation with inoperative items of equipment for a period of time until repairs can be accomplished. It is important that repairs be accomplished at the earliest opportunity. In order to maintain the required level of safety and reliability, the MMEL establishes limitations on the duration of and conditions for operation with inoperative equipment. The MEL provides for release of the aircraft for flight with inoperative equipment. When an item of equipment is discovered to be inoperative, it is reported by making an entry in the Aircraft Maintenance Record/Logbook. The item is then either repaired or may be deferred per the MEL or other approved means acceptable to Transport Canada prior to further operation. MEL conditions and limitations do not relieve the operator from determining that the aircraft is in condition for safe operation with items of equipment inoperative.

Operators are responsible for exercising the necessary operational control to ensure that the required level of safety is maintained. When operating with multiple inoperative items, the interrelationships between those items and the effect on aircraft Operation and crew workload must be considered.

DEPARTMENT OF TRANSPORT  
MASTER MINIMUM EQUIPMENT LIST

MINISTÈRE DES TRANSPORTS  
LISTE PRINCIPALE D'ÉQUIPEMENT MINIMAL

Aircraft – Aéronef BD-100-1A10	Revision NO - NO de révision: 3	Page
	Date: June 21/11	PRE-2

Operators are to establish a controlled and sound repair program including the parts, personnel, facilities, procedures, and schedules to ensure timely repair.

WHEN USING THE MEL, COMPLIANCE WITH THE STATED INTENT OF THE PREAMBLE, DEFINITIONS, AND THE CONDITIONS AND LIMITATIONS SPECIFIED IN THE MEL IS REQUIRED.

**A new section has been authorized as an alternative to the standard method of MMEL dispatch relief, as is normally achieved through fault isolation procedures, and subsequent reference to the dispatch LRU/Component MMEL relief. Standard references to MMEL dispatch relief are in Section 1. Following the standard MMEL herein, Section 2 has been developed with the objective of minimizing the requirement for maintenance personnel to be available, largely allowing flight crews to dispatch from the displayed CAS (Crew Alerting System) message, without specifically identifying failed LRUs or components.**

**As Section 2 is intended as an alternative dispatch relief methodology, the LRU/Component (Section 1) relief will be retained in order to provide maximum flexibility for relief. Flight crews / operators may dispatch failures with reference to either Section 1 or Section 2 of this MMEL to the advantage that either may provide.**

**It will be recognized in many cases that when comparing dispatch relief provisos for posted CAS messages in Section 2, to those of the related LRU / Component dispatch relief in Section 1, the provisos associated with dispatching the CAS message will generally be more restrictive in content and relief interval. Without the opportunity for fault isolation through maintenance, it must be assumed that worst-case failure conditions always underlie the posted message - commensurately, dispatch must be more restrictive. However, where maintenance personnel are available and fault isolation conducted, relief provisos in Section 1 may be found to provide fewer or less stringent restrictions upon operations and offer a longer relief interval.**

Aircraft – Aéronef BD-100-1A10	Revision NO - NO de révision: 4	Page 36-21
	Date: May 02/18	

1. System & Sequence NO Item NO de système/série article	2.	Number Installed Nombre d'articles installés	3. Number Required For Dispatch Nombre d'articles à expédier	4. Remarks or Exceptions Remarques ou exceptions
36 – <u>PNEUMATICS</u>  20-01 Leak Detection Loops (Cont'd)  c) Bleed Loops Aircraft with SB 100-21-05, Aircraft 20101 and Subs.	C	2	1	(O) Right may be inoperative provided: a) R/H Bleed Valve is selected CLOSED, b) XBLEED Valve is selected CLOSED, c) L/H Bleed Valve is operative, d) L/H Environmental Control Bleed Pressure Indication System is operative, e) Left Flow Control Valve is operative, f) Pack Inlet Temperature Sensor is operative, g) APU bleed is used for engines start only, h) Cross bleed start procedure is not used for engine start, i) Ram Air Valve is verified operative, j) Operations are conducted at or below FL 250, and k) Operations are conducted within one hour from a suitable airport.  NOTE: The right bleed ducting loop includes all the ducting downstream of the right Bleed Valve down to the Flow Control Valve (FCV), the ATS duct. The right bleed loop also includes the APU and high pressure ground connection ducting.

## INTRODUCTION

The following new section has been authorized in accordance with the provisions of TCCA MMEL GB Item 00-00-0, Rev 1, or later, regarding dispatching directly from displayed CAS (Crew Alerting System) messages. “CAS message” relief is an alternative to the standard method of MMEL dispatch relief, as is normally achieved through fault isolation procedures, and the subsequent dispatch under the traditional LRU oriented MMEL relief. This Section 2, has been developed with the objective of allowing flight crews to dispatch from the displayed CAS message, without specifically identifying associated failed LRUs or components.

As Section 2 is intended as an alternative dispatch relief methodology, the LRU-oriented relief (Section 1) will be retained in order to provide maximum flexibility for dispatch relief. Flight crews / operators may dispatch failures with reference to either Section 1 or Section 2 of this MMEL to the advantage that either associated relief may provide. Upon comparison, it will be recognized in some cases that dispatch relief provisos for posted CAS messages to those of the related LRU dispatch relief, the provisos associated with the CAS message can appear more restrictive in content and/or relief interval. Without the opportunity for fault isolation through maintenance, it must be assumed that worst-case failure conditions always underlie the posted message - commensurately, dispatch should be more restrictive. However, where maintenance personnel are available and fault isolation conducted, relief provisos in Section 1 may be found to provide fewer or less stringent restrictions upon operations and offer a longer relief interval.

Section 2 has been arranged in alphabetical order of the indicated CAS message, without association to ATA Chapter. However, to avoid any possible mis-identification, each message is identified beneath as to its alert level.

Repair intervals (A, B, C & D) associated with CAS message reliefs herein, remain consistent with those of Section 1, and as described in the Definitions section in the front matter of this MMEL.

In conjunction with Section 2, a new separate dispatch procedures section has also been developed, also arranged in alphabetical order of the indicated CAS message. Where deemed necessary, the familiar “(O)” indicates the need for such supporting tasks, the scope of which shall be at the discretion of the approval authority. Acceptable tasks include, but are not necessarily limited to the following duties:

- a) Procedures described which exercise cockpit (or cabin) system controls utilized in normal flight operations;
- b) Deactivation of affected systems, as achieved by pulling system breaker or use of remote electronic system isolation;
- c) Visual inspection behind panels (internal or external) which are accessible without tools via quick-release latches and which clearly indicate their unlocked or unsafe state;(red/green safe window; flush fit latches).
- d) Visual confirmation of remote gauge indications, or valve positions as provided by integral external indicators.
